

C2C SmartCompliance and IBM Software Integrated to Deliver Advanced Compliance and Risk Capabilities

C2C's Compliance Mapper Software Now Integrated with IBM's OpenPages GRC Platform for Unmatched Insights into Compliance Risks and Analytics

ALEXANDRIA, VA, Dec. 31, 2018 — C2C SmartCompliance (C2C), a premier provider of risk and compliance management software, announced today a new [Regulatory Alert and Compliance Management \(RACM\) solution](#) that leverages the compliance management capabilities of [C2C's Compliance Mapper software](#) and [IBM's OpenPages GRC platform](#). The Compliance Mapper/OpenPages integrated solution unlocks unique insights into compliance risks, and regulatory compliance and change management through IBM's extensive investment in OpenPages and C2C's unmatched expertise in the development of forged-in-the-field compliance and risk management solutions.

"This powerful integrated solution gives upper-level management an early warning system to mitigate regulatory and compliance issues that can potentially disrupt business operations," explained Steve Crutchley, Founder and CEO of C2C SmartCompliance. "The competitive advantage is clear for small organizations with limited resources and large corporations with complex systems that are often spread across corporate divisions operating independently of one another."

Compliance Mapper provides the advanced content and mapping capabilities while OpenPages delivers a robust suite of tools covering policies and compliance management, IT governance, audit, issues/events and operational risk management. [The integration of Compliance Mapper with OpenPages](#) gives companies the best of both platforms to manage compliance, regulatory risk, regulatory changes, policies and controls.

C2C's Compliance Mapper provides forward-thinking organizations with a real-time early warning system of compliance and regulatory threats over a period of months, quarters or even further out.

"Our combined solution allows senior management to make business adjustments as needed to avoid negative outcomes," said Brian Alexander, C2C's CLO. "Imagine a GPS that can detect road hazards miles down the road for your business. That's the competitive advantage of the RACM solution powered by Compliance Mapper and IBM's OpenPages."

The combined solution unlocks critical risk and compliance data that is often hidden within organizations. This allows senior managers to control and manage compliance and regulatory risks rather than being thrown into a haphazard, all-hands-on-deck approach after threats manifest. The solution puts the right data regarding regulatory requirements, changes and relationships in the hands of compliance and risk professionals who need this information the most.

[About C2C SmartCompliance](#)

C2C SmartCompliance is a specialized enterprise Governance, Risk and Compliance software and services provider founded by information security, risk and compliance professionals with over 25 years of GRC auditing and consulting experience. The C2C methodology aligns an organization's compliance strategy with specific business objectives. C2C's products automate the costly manual processes associated with compliance initiatives, performing tasks in hours that normally take days. We provide stakeholders with a sustainable, business-centric, common operating compliance framework.
